

Akhilesh Mahajan

mahajan.akhilesh96@gmail.com / +91 9833855305 / Mumbai, Maharashtra

Summary

With over 6 years experience in IT industry, I specialize in DevOps, CI/CD, Docker, Kubernetes, Ansible and Monitoring. Orchestrating Containerized Application using Kubernetes. Skilled in setting up complete CI/CD pipelines using Jenkins, GH Workflow and Azure DevOps. Experienced in monitoring with tools like Elasticsearch/Kibana and Prometheus/Grafana. Experienced in developing automation shell scripts to streamline deployments and system operations. I've contributed to client assessments, enhancing DevOps practices, documented POCs, SOPs, and RCAs. Proficient in managing both Cloud[AWS, Azure] and on-premise infrastructure.

Skills

Git, CI/CD, Jenkins, GitOps, Docker, Kubernetes, Argo CD, Ansible, Shell Scripting, Elasticsearch, Kibana, Prometheus, Grafana, PagerDuty, Hashicorp Vault, AWS, Azure, GCP, Terraform, Linux

Experience

Sr. DevOps Engineer

DDN • Pune, Maharashtra

02/2025 - Present

- Manage and deploy containerized applications on Kubernetes, leveraging ArgoCD for automated, declarative deployments and ensuring scalable, reliable environments.
- Troubleshoot and resolve CI/CD workflow failures across GitHub Actions through Jira, unblocking development and QA teams to maintain continuous delivery and reduce downtime.
- Enhanced GitHub Actions automation by designing reusable workflow templates, creating new workflows as per project needs, and optimizing pipeline execution using self-hosted runners on both Kubernetes pods and VMs.
- Developed Ansible playbook roles to automate environment setup across Ubuntu and Rocky Linux, enabling consistent provisioning for product testing and production use.
- Strengthened observability and incident response by configuring Prometheus, Grafana, AlertManager, and PagerDuty alerts for build, infra, and workflow events to ensure proactive issue resolution.
- Implemented Infrastructure as Code (IaC) with Terraform to automate cloud resource provisioning and environment setup for product testing on AWS and GCP, reducing manual setup time and ensuring reproducibility.
- Implemented a Makefile-based automation workflow that triggers Packer templates to build ISO images.

DevOps Engineer

PwC india • Mumbai, Maharashtra

03/2023 - 02/2025

- Responsible for maintaining and managing infrastructure and DevOps activities within the organization.
- Managed Kubernetes operations and maintained ArgoCD using GitOps for application deployments for both Non-Production and Production environments, ensuring alignment with project-specific requirements through Jira.
- Conducted independent R&D and Proof of Concepts (POCs) for new implementations, and deploying them effectively upon successful validation.
- Develop comprehensive documentation/Confluence Page for various activities such as issue tracking, Root Cause Analysis (RCA), Standard Operating Procedures (SOPs), and POCs.
- Developed automation scripts for pipeline health checks, resource cleanup, and deployment validation, improving workflow reliability and reducing manual intervention.

- Addressed vulnerabilities identified in monthly VAPT reports by upgrading and patching tools and servers, maintaining a secure infrastructure.
- Monitored infrastructure health and performance using tools such as Elasticsearch, Kibana, Prometheus, and Grafana,

DevOps Engineer

NSEIT • Mumbai, Maharashtra

03/2022 - 03/2023

- Managed end-to-end DevOps processes independently.
- Designed and implemented CI/CD pipeline jobs for microservices-based applications using GitHub Actions, optimizing deployment efficiency.
- Managed and monitored containerized environments with Elastic Kubernetes Service (EKS)..
- Collaborated effectively with cross-functional teams to troubleshoot and resolve complex application and system issues.
- Established comprehensive application monitoring frameworks using Elasticsearch, Kibana, Prometheus, and Grafana, enhancing system reliability and performance visibility.

DevOps Engineer

Capgemini • Mumbai, Maharashtra

02/2019 - 03/2022

- Implemented and maintained a comprehensive DevOps infrastructure, including Jenkins, SonarQube, Docker, Nexus Repository, and Ansible, to streamline development workflows.
- Automated Continuous Integration and Delivery processes using Jenkins.
- Containerized applications by generating Docker images from Dockerfiles and managing them in a private repository in Nexus,
- Utilized Ansible for configuration/infrastructure management and deployment related tasks.
- Administered and monitored Linux-based servers, providing live troubleshooting support to ensure system stability and minimize downtime.

Continuous Learning & Training:

AWS fundamentals [Coursera], Ansible Fundamentals (Coursera), Docker Essentials. (Coursera), Azure Devops (LinkedIn Learning), Kubernetes and its Advanced Concepts (LinkedIn Learning)
