PROFESSIONAL SUMMARY

Software Development Engineer II with 5 years of experience building scalable backend and distributed systems. Skilled in Java, Spring Boot, Docker, Kubernetes; with expertise in microservices architecture, SOLID principles, GOF Design Patterns and cloud-native development.

PROFESSIONAL EXPERIENCE

VOIS (Vodafone Intelligent Solutions)

Jun 2024 – Present

Assistant Manager (Software Development Engineer 2)

Pune, India

- Implemented **GraalVM Native Image POC** and led team migration of **Spring Boot** services to native executables — reducing **Kubernetes** hosting costs by **50%** and improving microservice startup by **10x** across 200+ microservices.
- Implemented **KEDA (Kubernetes Event-Driven Autoscaling)** for auto scale-to-zero based on real-time request volume, delivering significant infrastructure cost savings org-wide.
- Built **Spring Boot** microservices for security vulnerability reporting, applying **Factory & Strategy design patterns** and **SOLID principles** for extensible, testable architecture.
- Executed **Java 11→17** and **Spring Boot 2→3** migration; adopted Records, Sealed Classes, Pattern Matching; enforced code quality via **SonarQube** and vulnerability scanning via **Trivy**.
- Containerized services using **Docker** with optimized multi-stage Dockerfiles via **Kaniko** post Kubernetes 1.24 upgrade; led **GitHub Copilot AI POC** with GPT as the standard LLM model while exploring Claude Sonnet & Opus, driving enterprise adoption.

VOIS (Vodafone Intelligent Solutions)

Aug 2021 – May 2024

Senior Executive (Associate Software Engineer)

Pune, India

- Developed features across **20+ Spring Boot microservices** using **Builder & Observer design patterns**, Java Streams, Lambda Expressions, and Functional Interfaces for high-performance data pipelines.
- Authored unit tests for 20+ microservices using **JUnit 4** and **Mockito** (mocking, stubbing, argument captors), achieving **>80% code coverage** and improving production reliability.
- Led **Java 8→11 migration**: adopted var, HTTP Client API, enhanced Optional, updated **Maven** build configurations; provided L2 production support and client communication within SLA.

EDUCATION

DY Patil College of Engineering, Pune University

2017 – 2021

Bachelor of Engineering in Computer Science

CGPA - 8.94/10

TECHNICAL SKILLS

Programming Languages: Java 8/11/17 (Proficient), SQL, Bash

Frameworks & Architecture: Spring Boot 2/3, Spring MVC, Spring Data JPA, Hibernate, Spring Security, REST APIs, Microservices, SOLID Principles, GOF Design Patterns, Event-Driven Architecture, TDD

Java Features: Streams API, Lambda, Functional Interfaces, Optional, Records, Sealed Classes, Pattern Matching, CompletableFuture, Collections Framework

Infra & Tools: Docker, Kubernetes (K8s), KEDA, Kaniko, Jenkins, CI/CD, GitHub Actions, GraalVM, GitHub Copilot, IntelliJ IDEA, Git, Maven, Postman

Testing & QA: JUnit 4/5, Mockito, Integration Testing, SonarQube, Trivy, JaCoCo

Databases: Oracle DB, MySQL, MongoDB

Other: Distributed Systems, System Design (HLD/LLD), Microservices, Agile/Scrum, Ownership, Cross-team Collaboration

HONORS & AWARDS

Star Award VOIS	Received the Star Award for implementing the GraalVM POC, contributing to a 50% cost reduction for the team's cluster.
Star Award VOIS	Received the Star Award for implementing KEDA, contributing to cloud infrastructure cost optimization for the organization.
Runner-up DYPcoe Hackathon	Won runner-up for the Healthchain project utilizing blockchain technology for healthcare data integrity.
