MLOps / DevOps / DevSecOps Lead

CICD | Automation | Azure Cloud | Kubernetes | Terraform

MLOps / DevOps Lead with **18+ years of experience** driving **cloud-native transformation** in regulated banking environments. Provided strategic direction and operational leadership for **Kubernetes-based container platforms**, Azure infrastructure, and CI/CD automation initiatives. **Led** and mentored a **team of 6 DevOps engineers** while guiding cross-functional stakeholders to deliver secure, compliant, and highly available platforms through Python-driven automation and **DevOps best practices**.

EXPERTISE AND SKILLS

- MLOps : Kserve, ArgoCD, MLFlow, MLOps Pipeline, DVC, ML Life cycle automation
- CI/CD & DevOps: TeamCity, Buildbot, Bamboo, Jenkins, Terraform, JFrog Artifactory, Vault
- Cloud & Infrastructure: Microsoft Azure
- Programming & Scripting: Python, Shell, PowerShell, C/C++, Embedded C
- Monitoring Tool: Grafana, Prometheus, Nagios
- Version Control & Repo Management: Git, SVN, Stash, GHE
- Build & Configuration Tools: Gradle, CMake, Ant, Boost
- Automation & Testing: REST API integration, automated deployment scripts
- Methodologies & Tools: Agile, Jira, Confluence, Bugzilla
- Analysis & Debugging: Valgrind, Kubeshark, Wireshark
- DevSecOps Tools : SAST (Sonarqube), SCA (pip-audit), DAST (OWASP ZAP)

PROFESSIONAL EXPERIENCE

Citicorp Services India Pvt Ltd, Pune

January 2020 - Present

MLOps Specialist

- Reduced model deployment time by **40%** and successfully operationalized 1 production-grade ML model with scalable infrastructure.
- Designed and executed an end-to-end MLOps workflow, covering model training, versioning, deployment, serving, scaling, and lifecycle management across 3 environments (DEV, UAT, PROD).
- Reduced system downtime by **10%** by deploying ML models on a Kubernetes cluster using Deployments, Services, and Ingress to enable scalable and resilient inference.
- Built and implemented a KServe-based ML model serving framework supporting multiple machine learning models, improving deployment frequency by 40% and standardizing inference APIs using cloud-native deployment practices.
- Automated 80% of manual ML deployment activities by building CI-based MLOps pipelines that streamlined model training, artifact versioning, and deployment readiness.

DevOps Specialist

- Designed and implemented **cloud-native, containerized applications** for the **banking domain** using Docker and Kubernetes, ensuring high availability, scalability, and fault tolerance for 3 business-critical workloads.
- Mitigated non-compliance incidents by **20%** by enabling monitoring and observability for Kubernetes workloads through centralized logging and metrics across 3 applications, ensuring adherence to banking SLAs and audit requirements.
- Improved platform security by reducing incidents by **10% by** designing and managing Kubernetes clusters for 3 banking applications, leveraging namespace isolation, RBAC, secrets management, and network policies for regulatory compliance.

- Enabled reliable and compliant deployments for **15+ microservices** by implementing CI/CD pipelines for containerized applications, incorporating automated build & deployment and rollback mechanisms aligned with banking compliance standards.
- Enabled engineering performance visibility across 4 cross-functional teams by collaborating with Product Managers, architects and stakeholders to design resilient architectural solutions.
- Led **Bitbucket to GitHub Enterprise (GHE) migrations of 1500+ repositories**, ensuring secure repository transition, full commit history preservation, and governance controls for regulated banking environments.
- Implemented **Infrastructure as Code (IaC)** to automate provisioning, release, scaling, and monitoring of 3 application components across 3 environments (DEV, UAT, PROD) each, ensuring consistency and auditability.

HCL Technologies, Pune

March 2018 – January 2020

Technical Specialist / DevOps Lead

- Designed and implemented CI/CD pipelines supporting 4 WorkFusion projects using TeamCity, Gradle, and Git, supporting Dev, UAT, and Production environments.
- Automated deployments using Python scripts and REST APIs, reducing manual effort and deployment time by 30%.
- Developed dynamic RPA bot allocation system for 10+ bots, enabling users to configure bots via a flask-based web interface with JSON configuration files.
- Collaborated with 4 cross-functional teams to ensure smooth integration, automated testing, and rapid release cycles.

Robert Bosch Engineering & Business Solutions, Bangalore

October 2015 - March 2018

Technical Specialist

- Enabled navigation capabilities across 2 vehicle models by developing an HMI system for automotive infotainment using C++, Scene Composer, and IAR Visual State Machine.
- Reduced user interface errors by 30% by managing state machine logic and GUI flow for Map, Traffic, and Address Book modules within a model-view-controller (MVC) framework.

IGATE Global Solutions, Pune

December 2011 - October 2015

Senior Software Engineer

- Led Buildbot & Bamboo CI/CD automation, integrating Git/SVN repositories for enterprise applications.
- Improved file transfer success rate by **20%** by developing Python-based FTP automation scripts with robust logging and error handling for reliable file transfers.

CAREER HISTORY

Erhardt + Liemer India Pvt Ltd, Ahmedabad

May 2011 - November 2011

R&D Executive

Smart Guard Systems India Pvt Ltd, Ahmedabad

December 2009 - February 2011

Development And Test Engineer

Spectra Technovision India Pvt Ltd, Ahmedabad

August 2007 - December 2009

Embedded Developer

EDUCATION

B.E. Electronics & Telecommunication

Veer Narmad South Gujarat University

Diploma Electronics & Communication

Government Polytechnic, Gandhinagar
