Experience

Unique Identification Authority of India (UIDAI)

Bangalore

Senior Site Reliability Engineer

July 2022 – Oct 2025

Deployment of a Chat Service – Mattermost

- Deployed and operated Mattermost using Docker on Ubuntu VM; incorporated with Grafana and Jenkins for real-time alerts and CI/CD notifications, reducing MTTD by 35%.
- Systemized user and channel management using Python scripts, cutting manual admin work by 80%.

Metrics Extraction and Observability Setup

- Integrated Prometheus-based collectors to extract system-level and application-level metrics from Linux servers and microservices, enabling unified observability across environments.
- Designed and applied Grafana dashboards visualizing service-level indicators (SLIs) and defined reliability objectives (SLOs) for critical services using PromQL queries, improving real-time visibility and reducing alert noise by 25%.

Log Management and Monitoring Implementation

- Deployed Filebeat agents on SEDA servers to centralize logs into the ELK stack.
- Applied Elasticsearch ILM policies for mechanized log rollover and retention, improving log availability and storage efficiency.

Terraform-Based On-Prem Datacenter Orchestration

- Automated compute, network, and storage provisioning across dual on-prem datacenters using reusable Terraform modules, ensuring consistent, repeatable, and drift-free environment deployments.
- Implemented Terraform-based DR automation to provision and maintain mirrored VM and network infrastructure in a secondary datacenter, enabling rapid failover and improving recovery readiness.

GitOps-based Continuous Delivery using ArgoCD

- Configured and version-controlled ArgoCD deployment manifests across multiple microservices, while deploying and debugging applications by resolving sync errors, manifest mismatches, resource conflicts, and deployment failures.
- Automated CI/CD build and deployment processes across 10+ repositories using Gitea, Bitbucket, Jenkins, and ArgoCD, enabling one-click (zero-touch) deployments, reducing manual deployment time by 60%.

Post-Incident Analysis and Continuous Improvement

- Facilitated regular post-incident analyses, driving RCA and corrective actions that meaningfully decreased recurring issues by 25% and strengthened operational stability.
- Collaborated with SRE and development teams to refine alert thresholds, enhance observability, and align reliability metrics (SLIs/SLOs) with business goals.

Backend Development – Sandbox Platform

- Developed and maintained backend infrastructure for sandbox portals using Django REST Framework, enabling 100+ client organizations to securely onboard testers and evaluate authentication services in isolated environments.
- Engineered 15+ secure REST APIs and integrated Amazon S3 with pre-signed URLs for document storage. Utilized MySQL for database management and conducted API testing using Django API Client.

Projects

Serverless Blog Generator

- Built a serverless event-driven blog platform achieving 99.99% uptime, where an API Gateway triggers a Lambda function on HTTP request to generate and store dynamic blog content in S3.

Kubernetes Observability and Monitoring on AWS EKS

- Deployed Prometheus and Grafana on AWS EKS, defining ServiceMonitors for metrics collection and creating Grafana dashboards for real-time Kubernetes observability.

Education

Indian Institute of Technology (BHU), Varanasi

Varanasi, Uttar Pradesh

Bachelor of Technology in Metallurgical Engineering (8.17 CPI)

July 2018 – May 2022

Skills

Languages: Python, Bash, Groovy

Tools & Technologies: Docker, Kubernetes, Ansible, Terraform, Kafka, GitOps, Prometheus, Grafana, UNIX/Linux, TCP/IP

Courses: CKA, AWS SAA

Core Competencies: DSA, System Design, Monitoring & Observability, Incident Management, AWS
