

SHUBHAM LAD

DevOps Engineer

+91-9920701227 | shubhamlad1613@gmail.com | [Linkedin](#) | Mumbai, India

Professional Summary

Experienced DevOps Engineer with 7 years of hands-on expertise in **cloud infrastructure, CI/CD pipeline automation, and deployment management**. Skilled in leveraging a wide array of DevOps tools and technologies, including **Jenkins, Gitlab pipelines, Docker, Kubernetes, Terraform, CDK and AWS**, to ensure seamless application deployment and scalability. Proficient in designing and optimizing end-to-end automation processes for cloud-native applications, with a proven track record of enhancing system reliability and performance through efficient troubleshooting and root-cause analysis. Experienced in managing infrastructure as code (IaC) using **Terraform and AWS CDK**, implementing monitoring solutions like **New Relic, Splunk**, and leading cross-functional teams to deliver high-availability solutions in Agile environments. Strong collaborative communicator, capable of adapting to dynamic environments and delivering impactful results.

Work Experience

Trafigura - Senior DevOps Engineer

(January 2025 - Present)

- Working in **Data Science and Engineering** department which researches, develops and provides analytics and data services to trading business and other commercial operations at Trafigura.
- Working with Data Scientists, Data Engineers and Quantitative Finance experts to develop and maintain the **Artificial Intelligence chatbot** and other research works.
- Created the pipelines on **Gitlab** from scratch to build and deploy the **AI chatbot**.
- Developed and deployed feed jobs on AWS ECS to enable data engineers to ingest and store data in Amazon Redshift for analytical processing.
- Provisioned the infrastructure on AWS using **Cloud Development Kit (AWS-CDK)** in python and **Serverless Application Model (SAM)**.

Salesforce - MTS DevOps

(November 2022 - January 2025)

- Spearheaded the implementation and administration of core DevOps tools including **Jenkins, Docker, Kubernetes, SonarQube, Terraform, and AWS** to support continuous integration and delivery pipelines.
- Developed and managed **CI/CD pipelines** from scratch using Jenkins, optimizing pipeline efficiency and reducing deployment times across multiple environments (dev, qa, preprod, production).
- Created and maintained **Helm Charts for Kubernetes deployments**, enhancing the modularity and reusability of configurations across clusters.
- Led the infrastructure automation using **Terraform** for AWS resource provisioning and wrote Argo workflows for seamless resource creation, enhancing scalability and operational efficiency.
- Designed, built, and maintained **EKS clusters**, ensuring optimal networking and security configurations while performing regular system upgrades to enhance performance.
- Automated routine tasks by developing a **Slack Bot using Python**, streamlining manual processes and improving team productivity.
- Monitored system performance and resolved issues across multiple environments, resulting in an improvement in deployment success rates.
- Collaborated closely with software development and testing teams to deliver high-availability solutions, implementing best practices in CI/CD and infrastructure management.

Accenture - DevOps Engineer

(March 2021 - November 2022)

- Developed and maintained scalable CI/CD pipelines using Jenkins for automating the build, test, and deployment processes, improving code release frequency by 30%.
- Implemented containerization using **Docker** and **Kubernetes** for application packaging and deployment, leading to faster application rollouts.
- Managed infrastructure scaling through the configuration of **Jenkins master-slave (controller-agent) architecture**, ensuring that the CI/CD system could handle increased workloads.
- Automated deployment configurations and provisioning of resources using **Ansible playbooks** and **Helm charts**, reducing manual intervention by 50%.
- Integrated **Git** for source control, overseeing branching and tagging strategies to streamline the code release process.
- Collaborated with teams to implement DevSecOps practices, ensuring that security was integrated into every stage of the CI/CD pipeline, from code commits to deployments.
- Created and maintained **Maven**-based build systems, managing Java applications and ensuring proper artifact versioning for deployment.
- Actively participated in **Agile sprints**, providing critical support for continuous delivery and deployment processes across multiple environments (dev, QA, preprod, production).

Atos Syntel - DevOps Engineer

(June 2018 - March 2021)

- Implemented automated CI/CD pipelines using Jenkins, improving deployment consistency and reducing errors by automating repetitive manual tasks.
- Managed large-scale code deployments using **IBM Udeploy**, troubleshooting deployment failures and ensuring application uptime in production environments.
- Developed **shell scripts** to automate system administration tasks, improving operational efficiency and reducing manual intervention.
- Monitored the performance and availability of production environments using customized React tools, responding to incidents in real-time and ensuring minimal downtime.
- Collaborated with cross-functional teams, including developers and testers, to provide DevOps best practices for continuous delivery and infrastructure management.
- Used Maven to manage project builds and dependencies, improving the integration process for Java-based applications.
- Provided operational support by addressing Service Requests through PDSM ticketing system, ensuring prompt resolution of day-to-day production issues.

Technical Skills

AWS, Jenkins, Docker, Kubernetes, Terraform, CDK, Gitlab Pipelines, Ansible, Argo, Python, Shell Scripting, Groovy, GIT, SonarQube, Helm Charts, Maven, npm, JFrog, Nexus, NewRelic, Splunk, Jira, Confluence

Certifications

- **AWS Certified Solution Architect - Professional** (Valid until 2026)
- **AWS Certified Solution Architect - Associate** (Valid until 2026)

Education

Bachelor of Science - Information Technology

Mumbai University (2015-2018)
First Class with 75.27%
